

## Delmar's Geriatric Nursing Care Plans

By Sheree Raye Comer, RN, MS

This concise publication uses the nursing process to provide an accurate, easy to use format to apply the information to the care of the geriatric client.

ISBN 0-7668-5992-4  
(C) 2005  
352 pp, 8 1/2 x 11,  
Softcover

The purpose is to facilitate the care planning process for both the novice and experienced practitioner utilizing NANDA Taxonomy II, Nursing Outcome statements, and Nursing Intervention Classifications. The publication fills a necessary need for a concise, easy to use care plan from which the practitioner can apply information to their geriatric clients. The book meets the authors' objectives.

The information is presented in a manner that will enable both the novice and experienced practitioner to use it. The rationale for the interventions is especially nice for the student to understand the science base for the interventions chosen.

This is a system-based nursing care planning book that addresses the unique needs of the geriatric client. The book includes NOC, NIC, and NANDA nomenclature. The rationales are specific to geriatric clients' changing needs. The book is easy to read, the information is easy to find, and the examples are nicely done. I especially liked the introduction to each chapter as a quick review of important facts.

This is a worthwhile publication that will be an excellent tool for students or practicing nurses. The book is a concise reference for individualizing care for geriatric clients.
